ESF Monitoring - Reports Obligations - Which data are subject to the completeness requirement? Which records should be excluded from/included in the indicators data and used for representative sampling?

In order to be included in the aggregates for reporting indicators and for drawing representative samples, records have to be complete for all non-sensitive personal data (gender, employment status, age, education level, and household situation) excluding homelessness and from rural areas. Incomplete records should be included only in the grand total of participants figure.
