ESF Monitoring -Data Management - Will it be possible to apply retroactive changes to previous periods with annual reporting?

Yes. SFC allows to retroactively update monitoring data in case of changes in participation records or to correct errors in recording for already submitted AIRs. Further clarifications on what constitutes an update or a correction of reported data are included in an explanatory note submitted by the Commission to the ESF Technical Working Group to its meeting on 24-25 March 2015.
