

IR - Financial Instruments covering more than one Priority Axis

In SFC2014 the name of the financial instrument is used as an identifier and **each name can be used only once**. If a financial instrument covers more than one Priority Axis, and in order to provide the data for all contributions to the financial instrument, the appreciation of the priority axis should be added under different names, for example, Investment Holding PA1, Investment Holding PA2, ... in the IR (section 8)

When the Commission reports on the financial instruments the different contributions to the fund of fund/financial instrument will be merged. The Commission will make changes to the programme to allow instruments from different priority axes and Operational Programmes to have the same name.
