

AIR - Section 11 - Is there an Excel template for the tables import?

There is no template available for the import of the data into the different tables in Section 11. The easiest is to:

1. Use the Export button to Export the table as Excel
2. Fill or modify the values in the 4 columns and save the file
3. Import the modified Excel file in SFC2014

Note that:

- 1st column is the indicator code
- 2nd column is the indicator value
- 3rd column is the additional focus area (if any created by the MS)
- 4th is the 'out of which EURI' for the indicator value
