General - Is it possible to import data from and export to Excel ?

- **Import from Excel** is only available for selected and very few tables. Wherever the functionality is active, it will be indicated in the Quick Guides available in the Support Material section of our Portal.
- **Export to Excel** (Excel and CSV formats) is available on all Tables: 1. Right click on the Table / 2. Export / 3. CSV or Excel Export

Be aware that the export function to Excel is a built-in feature, part of the AgGrid table component, and doesn't always work correctly. Often it does not copy all the columns.

- **Copy-paste** data from/to Excel works in all Tables.
