OP - How to create a Minor Programme Version change?

When the MS wants to create a new version of the programme containing modifications which do not require a new Commission Decision, the option '**Major amendment**' under '**General > Version Information**' should be unticked (this option is ticked by default after creating a new programme version).

When the Major Amendment option is unticked the MS related fields **Justification for amendment, MS amending decision number, MS amending decision date and MS amending decision entry into force date** need to be filled. This is only possible in versions greater than 1.

This kind of version will be set to **'ADOPTED BY MS'** when sent to the Commission and when only non-decisional parts of the Operational Programme have been modified.

Note that when Major amendment is left ticked, a Justification is required and the version will need a new Commission Decision, even when only non-decisional parts have been modified.
